

The Future Willcox, in partnership with its OEM supplier Shorepower Technologies, has the ability to fast track its deployment and management of Willcox branded EV charging points globally. The Willcox brand of EVSE, also known as electric vehicle charging stations, will offer a seamless customer experience, with the highest safety standards through careful planning and deployment. Willcox, in conjunction with its partner, has developed a comprehensive charging infrastructure model that includes grid management, charging station hardware sales, installation and service, and technical and operational expertise and training, all based on a financial model that provides considerable benefits to all parties involved. Willcox also offers the ability to expand into additional areas of business, including fuel stations and home charging, the sale of EV hardware, installation and maintenance services to residential customers, provision of installation and maintenance services for third party EV charging infrastructure, development, and provision of turnkey EV fleet solutions Shorepower designs, manufactures, installs, and operates electrified parking spaces at truck stops, rest areas, travel plazas, warehouses, truck depots, terminals, malls, businesses and other types of parking areas. Since 2004, Shorepower has electrified over 2,000 parking spaces throughout North America.
